PROFILE

My current career goal is to work as a Full Stack Web Developer. My prior career experiences have been technology based and it has become clear to me that programming is the direction I want to pursue. I served six years in the United States Navy as a Firecontrolman (FC) and was responsible for operating and maintaining a complex weapon system aboard the USS Klakring. After my enlistment, I completed an Associates of Science in Medical Radiography and have worked in healthcare for the last three and a half years as an X-Ray Tech in a hospital setting.

I have a distinct ability to give character and style to my projects. My creative eye and ability to develop new features, dedicated work ethic and attention to detail, and ability to work well with peers, make me a valuable employee to have.
